Lifestyle A new skin treatment that uses oxygen to rejuvenate the skin

In the daily up and down of life, we Delhiites are left with no time to take care of our looks. Working long days and travelling on polluted roads often leaves the skin dull and blemished. No wonder spas and beauty clinics are attractive options to rest and rejuvenate even as we maintain our hectic schedules. Among these is [Intraceuticals](#), an elite line of spa treatment and complementary skin care products founded on innovative technology. The brand's signature treatment uses oxygen under pressure and hyaluronic acid technology to deliver shiny and glowing skin by deeply hydrating it.

The company's aim is to harness emerging, cutting-edge technology to deliver never-before seen results in skin care.

Announcing the launch, Collen Chan, the company's Regional Director Asia & Middle East, said, "[Intraceuticals](#) Oxygen Infusion therapy is the first ever non-invasive treatment breakthrough to address fine lines and wrinkles and overall hydration. After establishing our presence in over three thousand clinics worldwide we believe there will be high degree of acceptance for [Intraceuticals](#) with the changing lifestyle and trend."

Powered by its signature system, [Intraceuticals](#) products address skin issues that bother most of us: dehydrated skin, premature ageing, sensitivity, sun damage, brown spots, fine lines and wrinkles and problem prone skin.

Described as more effective than a facial and less invasive than a procedure, the [Intraceuticals](#) Infusion is meant to instantly breathe new life into the skin and make it look more beautiful and refreshed.
